OF ZOONO® **DAYS OF**
PROTECTION

SCENE CLEAN & ZOONO®?

Provide a **Safe** and **Trusted** hygienic environment for your clients and employees, giving reassurance and peace of mind through these uncertain times.

Protect your capabilities and productivity through your employees' health and wellbeing.

Allow you to become the trusted company of choice by reducing exposure of our **communities** to harmful pathogens.

ZONO® SCIENCE

ZONO® is non-toxic, water based, food safe, child friendly and contains no harsh chemicals or toxins, as a liquid it is less toxic than vitamin C or coffee.

As opposed to other products that kill pathogens chemically through dehydration (i.e. alcohol), **ZONO®** physically kills pathogens using positively charged anti-microbial pins that attract the negatively charged molecular structure of micro-organisms.

Traditional disinfectants kill when wet; **ZONO®** kills when dry, therefore providing protection for at least 30 days!

Routine cleaning can continue and does not disrupt the **ZONO®** molecule or its antimicrobial activity.

**PROTECTION FOR
YOUR OFFICE AND
STAFF LONG AFTER
THE CLEANERS HAVE
LEFT THE BUILDING!**

ZOONO[®] is not a cleaning chemical nor are we here to replace your cleaners, who offer an essential service in maintaining your overall workplace. We differentiate ourselves by providing you the next level of protection and hygiene with **ZOONO**[®] and fact-based data.

We provide measurable pathogen/virus/bacteria protection and support our claims with testing and detailed reports.

Why **assume** the surface is free from bacteria, when we can **prove** it to you?

Our 3-Step Pathogen Protection Program consists of:

- 1. Protecting**
- 2. Monitoring**
- 3. Reporting**

1. PROTECT

After recording initial pathogen levels and surface preparations are complete, **ZOONO**[®] is applied using our fogging procedures.

We use a ULV Cold Fogging for indoor and outdoor applications respectively. We can safely apply **ZOONO**[®] to a wide variety of surfaces from corporates offices, homes, hotel rooms, kitchens, class-rooms to out- door playgrounds, public spaces, stadiums and sporting / entertainment venues.

When 'fogged', the **ZOONO**[®] particles bond together to form a perfect layer of anti-microbial spikes on each surface, creating an uninhabitable environment for pathogens lasting 30-days.

2. MONITOR

After **ZOONO**[®] is applied, we swab-test your pathogen levels again with our state of the art ATP Pathogen Testing Devices, providing instant results.

We focus on high traffic surfaces, such as reception areas, elevators, door handles, telephones, keyboards and more. We also randomly test less commonly touched surfaces, including walls, windows and meeting room tables.

Our testing results are measured as:

- <36 Safe
- 36-100 Low Risk
- >101-200 Caution
- >201+ Contaminated

We compare initial results to our post-**ZOONO**[®] application and monitor pathogen levels at random throughout the 30- day protection period.

It is expected that after **ZOONO**[®] is applied, test results will comfortably remain within the <100 Safe Zone for 30-days..

3. REPORT

You receive an in-depth report after each **30-day protection** period.

We document your pre-existing pathogen levels, highlighting the most contaminated areas and include post-Zoono results for comparison.

After all data is gathered and findings are analysed, we recommend an ongoing monthly Pathogen Protection Plan, which includes random pathogen testing and monthly **ZOONO**[®] fogging.

Our goal is to deliver you a safe environment that operates continually within the <10 Safe Zone...

ZOONO® EFFICACY & TESTING

ZOONO® is TGA & FDA approved for use against Covid-19. Zoono has been proven to be 99.99% effective against coronaviruses on surfaces for 30-days.

Over 100 laboratory tests have successfully proven **ZOONO®**'s efficacy. Scientific reports are available upon request.

COMPANIES WHO TRUST ZOONO®

ZOONO® is trusted every day to keep millions of people safe across the world. Some recognisable corporations who trust **ZOONO®** include:

London Underground

Used by 2,000,000 people every day.

Fonterra Dairy Co-Operative

Responsible for 30% of the world's dairy production.

Metro do Porto & Metropolitano de Lisboa Metro services in Portugal

Over 500,000 daily commuters.

National Health Service of the United Kingdom (NHS)

Zoono has proven 99.99% effective against coronavirus and hospital super-bugs for 30 days and is used widely by the NHS.

DATAKOM Group

Has over 6,500 employees across 23 offices globally and an annual revenue of \$1.29bn.

Apium Animal Health

Over 140 highly experienced, industry-leading veterinary clinics across Australia who endorse and distribute Zoono Animal Care products to farms and families alike.
